Kapolei Shopping Center LED Upgrade

Hawaii Energy Systems and Energy Advisors partner to deliver 1.3 million kWh of savings through an LED upgrade at Kapolei Shopping Center.

This project made great financial sense, improved lighting levels, security, and shopping experience, while eliminating 960 metric tons of greenhouse gas emissions over the life of the LED lighting.

Mahalo to our kama'aina partner Hawaii Energy Systems and Arsenia Kailihiwa at HES for her efforts in spreading the good word in Hawaii on our behalf.

For the Kapolei Shopping Center, Energy Advisors chose a DECO Lighting LED fixture. The fixture selected utilizes a soft-cornered aerodynamic design to provide excellent light distribution and an aesthetically appealing appearance. The additional features of an attractive dark bronze, polyester powder coated finish for excellent impact, corrosion and UV resistance, make this an ideal fixture choice for this application.
